INTRODUCTION

Network Engineering graduate with practical experience building backend applications through project-based development. Hands-on experience developing RESTful APIs, implementing authentication systems, and working with databases through self-initiated production-style projects. Eager to contribute to a development team by delivering reliable, scalable, and maintainable backend solutions.

EXPERIENCE

PHP Programmer | Bluevy Cloud Plt

March 2024 – September 2024

- Developed and maintained backend components of a production-level e-commerce system using PHP with Laravel framework. Generated dynamic QR codes and securely validated them on the server side. Optimized MySQL queries to enhance data retrieval performance.

Software Quality Verification Tester | Electronic Arts

January 2025 – January 2026

- Tested backend services and validated API responses to ensure correct data processing. Performed functional and regression testing for gameplay features and system updates. Participated in sprint planning, daily stand-ups, and retrospective meetings.

EDUCATION

Bachelors in Network Engineering

Univerisiti Malaysia Sabah

CGPA: 3.70

PROJECTS

Real-Time Chat Web Application (Tech Stack: Node.js, WebSocket, React, Express)

- Designed and implemented a real-time chat system using WebSocket for bidirectional communication. Built backend message handling, connection management, and event broadcasting using Node.js. Implemented user session management and message persistence. Designed scalable server architecture to handle concurrent connections.

Subscription Platform REST API (Tech Stack: Spring Boot, Java, MySQL, Stripe)

- Designed and developed RESTful APIs for subscription lifecycle management (create, upgrade, cancel). Integrated Stripe payment gateway for recurring billing and webhook event handling. Implemented secure authentication and role-based access control. Handled Stripe webhooks to synchronize payment status with internal system.

Agentic Job Seeker (Tech Stack: Python, LangChain, FAISS, Gemini API)

- Developed a document ingestion pipeline LLM-based structured extraction to transform unstructured resumes into a schema-validated JSON format. Architected a Retrieval-Augmented Generation workflow that cross-references job requirements against stored candidate data using similarity search to generate suitable jobs.
-
